PRESS RELEASE

FOR IMMEDIATE RELEASE

Bridge-Soft Forms International Partnership

*Simmonds & Bristow to Partner with Bridge-Soft to
Improve Water Quality for Small and Medium Water Systems*

Manchester, NH – February 20, 2006– Bridge-Soft®, LLC, providers of innovative process and quality management software, announced today that Simmonds and Bristow (S&B) of Rocklea, Queensland (Australia) agreed to partner with Bridge-Soft to deliver the world's most advanced information management software to Australia's water and wastewater utilities, private laboratories, and related industries.

As a full service analytical laboratory, S&B will implement Bridge-Soft's Quality Management System (QMS) to manage their own internal laboratory information. This information is made available in real time to their clients through Bridge-Soft's Virtual Delivery Platform (VDP), an advanced web portal hosted by S&B. By combining Bridge-Soft's software technology with Simmonds & Bristow's 40 years of industry expertise, the partnership delivers a new virtual engineering and scientific support service department for regional water enterprises. The result is that water quality and safety is improved by offering large utility capabilities at small utility pricing.

David Bristow, Managing Director for Simmonds and Bristow expressed his thoughts on the partnership: "Every once in a while you come across a truly amazing idea. This is how I think of Bridge-Soft's products. They integrate everything we and our clients have done manually for years into one seamless integrated package."

"We were very fortunate to find such a solid, experienced, and diverse organization as Simmonds and Bristow," commented Jon DiPietro, CEO and Co-Founder of Bridge-Soft. "Their unique expertise that combines engineering/design and scientific/analytics services is the perfect skill set to leverage our technology and deliver high-quality, high-value solutions to the marketplace in Australia and the South Pacific."

Bristow adds "We are excited about the future, representing Bridge-Soft in Australia and working with them to create a world class water industry support package that truly provides an environmental solution that brings freedom and quality to life."

Bridge-Soft, LLC

Bridge-Soft is a software development company that specializes in providing process and quality data management solutions for water/wastewater utilities and analytical laboratories that significantly decrease the time required to collect, manage, and report on this information. Its goal of "Advancing Water Quality and Security Through Technology" is supported by constant product innovation that improves their customers' ability to implement advanced management programs such as ISO, HACCP, and risk management. With clients stretching from the U.S. to Australia, Bridge-Soft enjoys a rich and unique understanding of the challenges facing water utilities, analytical laboratories, and the regulatory agencies that oversee them from a global perspective.

About Simmonds Bristow

Simmonds and Bristow, located in Rocklea, Queensland (Australia), has been delivering first class service to the water, wastewater and environment industry since 1965. Offering laboratory, design, and training services to clients throughout Australia and the South Pacific, Simmonds and Bristow strive to provide environmental solutions, bringing freedom and quality to life. They maintain fully equipped laboratories to service Chemical and Microbiological analytical testing procedures, with both laboratories staffed by qualified chemists and microbiologists with experience in soil, water and wastewater analysis. Simmonds & Bristow's Engineers and scientists are competent in all facets of water and wastewater treatment and associated environmental issues. Understanding that good training improves the life and efficiency of plant operation, Simmonds & Bristow also offers full traineeship or on-site short courses through a Training Department that has the experience and curriculum to meet all training needs.
