

FEATURES

Deliver Information via Web

VDP is an online web portal for clients to interact with their laboratory. This sophisticated application provides rich features that add significant value to the test results they already receive.

Sample Request/Scheduling

Subscribers are able to remotely request sample test kits and configure the sampling details and required testing. Spreadsheets may be uploaded that contain sampling schedules weeks or months in advance.

Query Job Status

The VDP Dashboard makes it simple for subscribers to browse the status of their samples and testing. With a few simple clicks, they are able to see whether or not a test is complete as well as its result.

Email Notification and Reporting

Instant email notification of violations and/or warnings improves communication and reduces response time to problems. Analysis reports are emailed upon completion and are also available for viewing and/or downloading through a search screen in the VDP.

Analyze and Download Data

Powerful, easy to use ad-hoc querying gives subscribers the ability to analyze their data and generate graphs and reports online. The results of any query or analysis may also be downloaded directly into a spreadsheet for further analysis. The extensive scope of parameters available for reporting makes it possible, for example, to export test results with GIS tags and coordinates or view test cost detail reports.

Incident Reporting and Management

VDP offers a complete Incident Notification and Resolution Module (INARM). This feature not only allows subscribers to track, manage, and report on testing violations, but provides tools for tracking a complete, multi-step corrective action process for the incident; initiation, confirmation, root cause analysis, corrective action, and verification. Pre-configured "Action Plans" may also be utilized as part of HACCP and/or Emergency Response Plans.

It's time to expect more.™

Bridge-Soft is redefining expectations for software in the water, wastewater, and environmental laboratory industries. The Virtual Delivery Platform (VDP) is a breakthrough product that is paving the way to new and improved relationships between analytical laboratories and their customers

Analytical laboratories can expect:

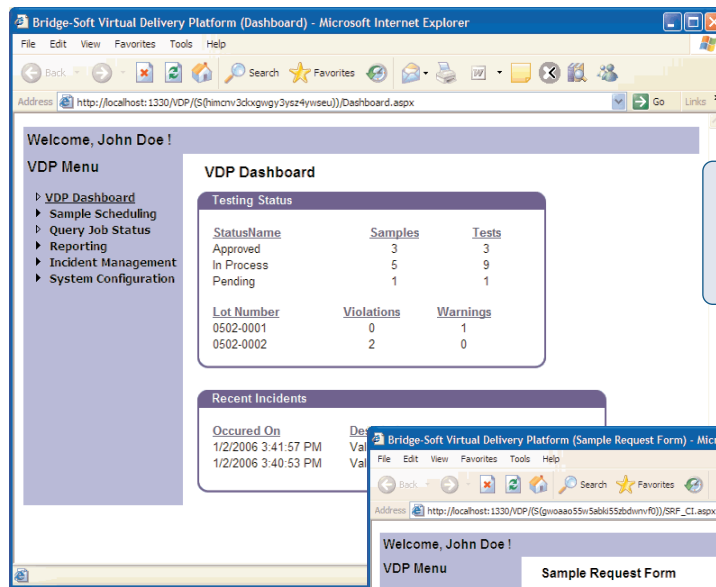

- Additional revenue from existing customers
- Expanded client base
- Improved customer service
- Dramatically increased efficiency

Their clients can expect:

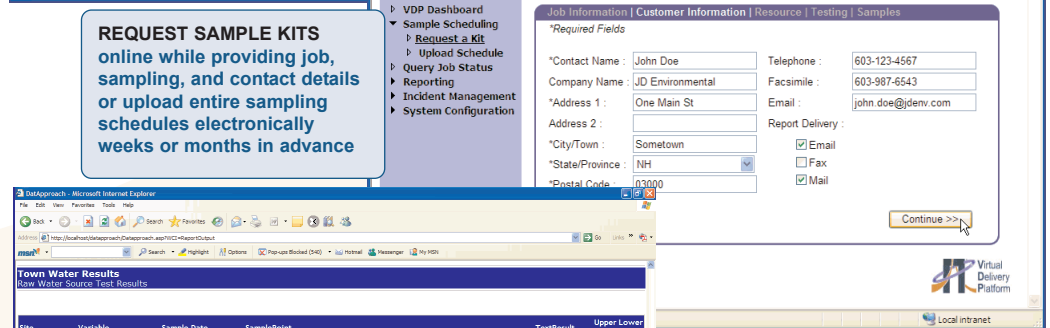

- Tremendous time savings
- Value-added services
- Secure, convenient access to information

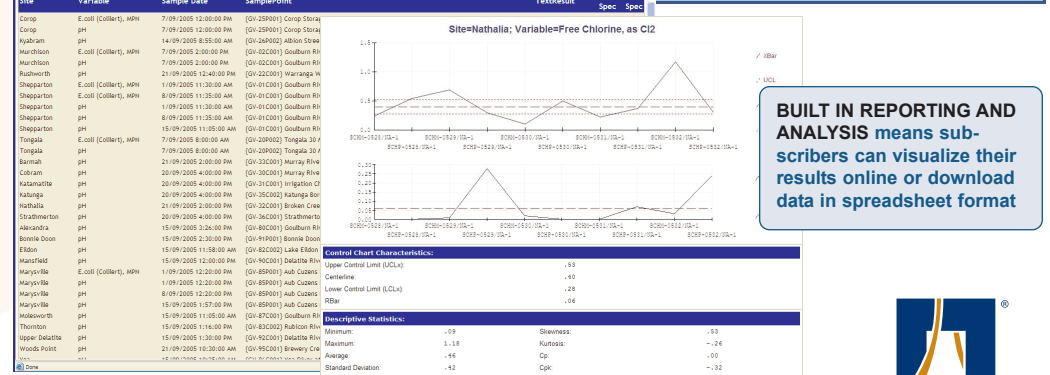

LOOK FOR THE VDP LOGO to identify members of the Bridge-Soft Solution Provider network.

CONVENIENT DASHBOARD presents overview of open jobs and quick access to information, tasks, and reports

REQUEST SAMPLE KITS online while providing job, sampling, and contact details or upload entire sampling schedules electronically weeks or months in advance

BUILT IN REPORTING AND ANALYSIS means subscribers can visualize their results online or download data in spreadsheet format
